

KORA

Better materials.
Built into tomorrow.

CIRCULAR MATERIALS

Company overview
Material / Process / Place

Waste is a resource. Design gives it direction.

Kora is a materials studio exploring how recovered glass, mineral offcuts and composite fragments can become useful architectural surfaces.

OUR APPROACH

Begin with the material, understand its limitations and develop a finish that works in real spaces.

OUR FOCUS

Surface development
Material coordination
Project specification

03

A clear path through the detail.

01

Material selection

Compare finish, tone and aggregate size against the practical needs of your space.

02

Specification support

Translate a material choice into clear dimensions, care details and installation notes.

03

Custom development

Explore a coordinated palette before committing to a full project.

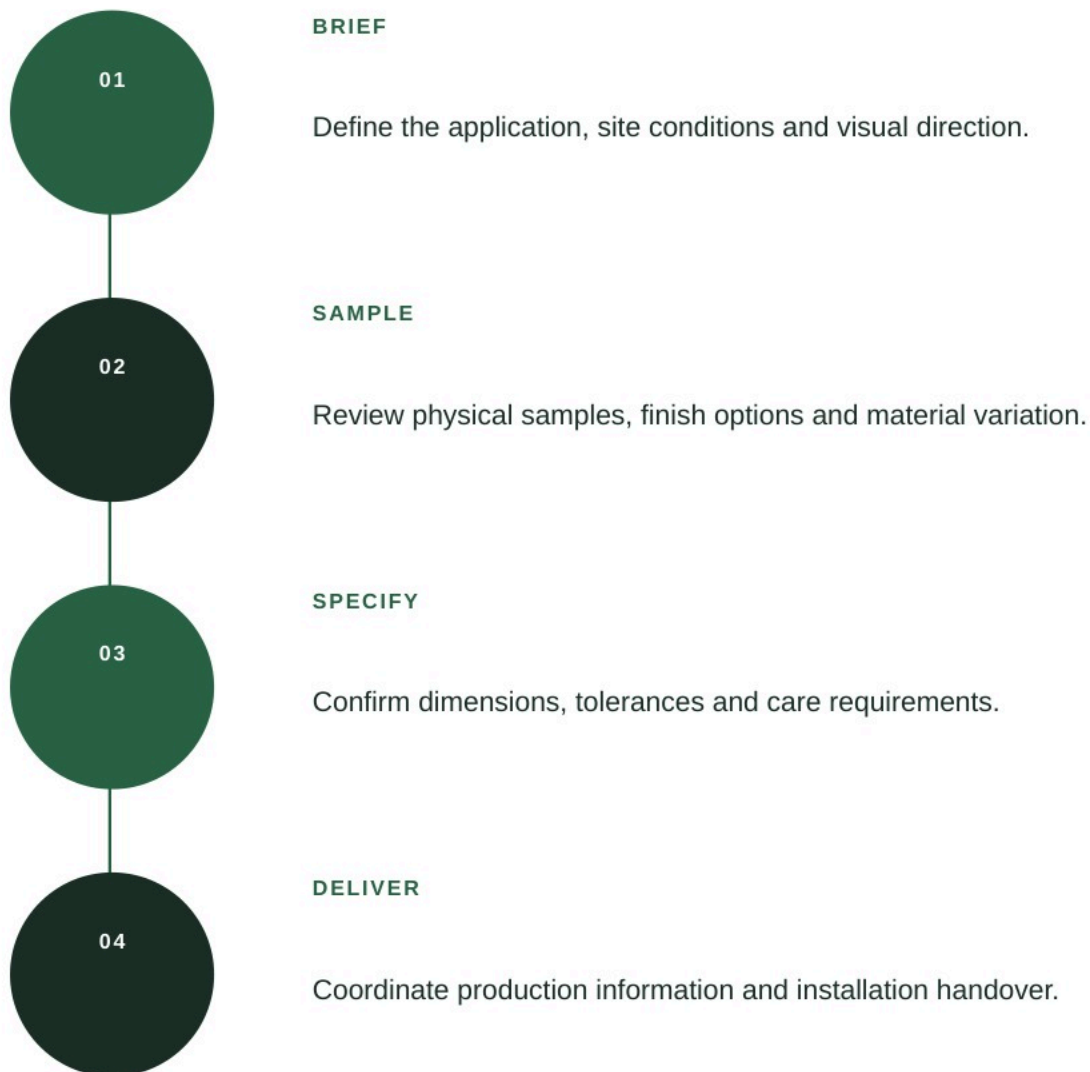

MATERIAL EXPLORATION

A surface with a story.

Recovered fragments create visible variation. The palette is designed to make it intentional.

APPLICATIONS
Reception areas
Furniture elements
Retail worktops

Good outcomes start with a good brief.

A welcoming first impression.

THE BRIEF

Develop a tactile reception surface with a calm palette and enough visual depth to carry a shared retail space.

THE DIRECTION

Fine aggregate and green tones create a restrained direction, grounded in material variation.

A useful brief gets further, faster.

INFORMATION	WHY IT MATTERS
Application and location	Sets performance requirements
Drawings and dimensions	Confirms scale and interfaces
Finish and palette	Guides material development
Timeline and quantity	Defines a realistic delivery scope

SPECIFICATION NOTE
Material selection should follow project-specific performance checks and appropriate installation guidance.

KORA

A better
starting point
for your next space.
